ORDR For Manufacturing

Manufacturing depends on precision, uptime, and tightly orchestrated operations. Every connected asset from PLCs and SCADA systems to robotics, sensors, quality-control devices, mobile scanners, and OT/IT infrastructure plays a critical role in productivity. But each one also expands the attack surface. ORDR brings control to this complexity with a platform built to see every asset, understand its behavior, and secure production without slowing it down. And with ORDR IQ, your team gains the intelligence and speed to outpace threats in environments where every minute of downtime matters. This is security built for modern manufacturing, fast, resilient, and grounded in operational truth.

INTELLIGENCE: AI Protect for Security
See Every Asset. Understand Every Vulnerability.

Production environments rarely lack data. They lack complete visibility across IT, OT, and IoT systems. ORDR identifies every asset the moment it connects, including PLCs, HMIs, CNC machines, sensors, AGVs, robotics, industrial IoT devices, engineering workstations, and more.

By understanding each asset's identity, role, communication patterns, and behavioral baselines, ORDR exposes hidden vulnerabilities early and stops attackers before they can move from IT into OT or disrupt production.

ACTION: AI Protect for Segmentation
Turn Intelligence Into Reliable Segmentation.

Manufacturers cannot afford operational disruption. ORDR delivers Zero Trust enforcement designed specifically for mixed IT/OT environments. With millions of flows analyzed daily and deep integrations across multi-vendor NAC and firewall ecosystems, segmentation becomes a reliable, repeatable practice aligned to manufacturing workflows.

No agents. No firmware changes. No downtime. Just safe, scalable Zero Trust enforcement across plants, warehouses, engineering environments, and global production networks.

ORCHESTRATION: ORDR IQ
The AI Orchestration That Makes Teams Faster.

ORDR IQ amplifies ORDR's real-world telemetry, behavioral intelligence, and asset context to deliver expert-level insight in seconds. It doesn't guess; it understands your production environment.

Whether assessing exposed PLCs, isolating compromised sensors, monitoring robotics communication paths, or generating segmentation plans for production lines, IQ accelerates every workflow without adding agents or infrastructure. ORDR IQ gives your team the speed to outpace threats, not just react to them.

The Power You Experience with ORDR

ORDR protects every connected asset from the plant floor to supply-chain operations. **ORDR IQ** gives your team the speed to outpace threats, not just react to them. **Together,** they reduce breach risk, prevent lateral movement, support regulatory and audit requirements, and strengthen operational resilience— without adding complexity.

Get Ahead. Stay Ahead.

Threats move fast. With ORDR IQ, your team can move faster. See what's inside your network before someone else does. One session often reveals what others miss.
