

HEALTHCARE SECURITY IS ENTERING THE AI ERA.

AI-powered visibility and control for
healthcare CISOs — only with ORDR.

2015

Healthcare security centered
on discovery tools.

Device inventory was the priority,
but for most tools, visibility was
incomplete and often inaccurate.

2020

Vendor sprawl
took over.

Multiple platforms had to be
stitched together for visibility,
policy, and enforcement — driving
costs up and slowing response.

2025

ORDR unifies it all in a
single platform.

AI-driven visibility, accurate device
context, and native segmentation
enforcement deliver real-time
protection and compliance
readiness.

YESTERDAY'S TOOLS CAN'T SOLVE TODAY'S RISKS.
