

ORDR for Energy & Utilities

Energy and utility operators power entire communities and attackers know it. Every asset across generation, transmission, distribution, and customer-facing systems is now connected, expanding the attack surface and raising operational stakes. ORDR brings control to this complexity with a platform built to see every asset, understand its behavior, and secure critical operations without adding friction. And with ORDR IQ, your team gains the intelligence and speed to outpace threats in environments where reliability is non-negotiable. This is security engineered for critical infrastructure—resilient, precise, and grounded in real operational truth.

INTELLIGENCE: AI Protect for Security

See Every Asset Understand Every Pathway.

Energy and utility networks don't struggle because they lack logs. They struggle because they lack complete visibility across IT, OT, and IoT systems. ORDR identifies every connected asset the moment it joins the network, including SCADA components, PLCs, relays, RTUs, AMI/AMR devices, substations systems, sensors, field laptops, grid-edge devices, and cloud-connected applications.

By understanding each asset's role, communication patterns, and behavioral baselines, ORDR exposes hidden vulnerabilities early and prevents attackers from moving laterally toward control systems or disrupting critical operations.

ACTION: AI Protect for Segmentation

Turn Intelligence Into Zero Trust Segmentation.

Uptime is mandatory across generation plants, substations, and field operations. ORDR delivers Zero Trust enforcement designed for mixed IT/OT environments, enabling segmentation that strengthens resilience without risking outages.

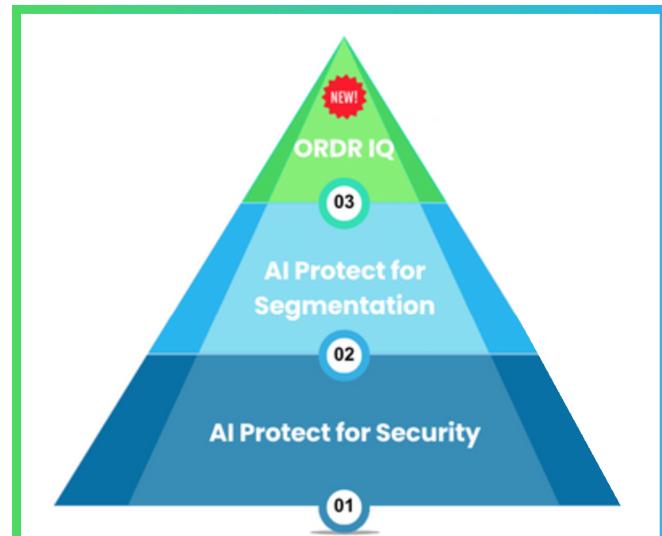

With millions of flows analyzed daily and deep NAC and firewall integrations, ORDR makes segmentation repeatable, predictable, and aligned to the operational realities of utilities. No agents. No firmware changes. No downtime. Just safe, scalable Zero Trust enforcement across generation sites, grids, field networks, control centers, and corporate IT.

ORCHESTRATION: ORDR IQ

The AI Orchestration That Makes Teams Faster.

ORDR IQ uses the telemetry, asset intelligence, and behavioral history already collected by ORDR to deliver expert-level insight in seconds. It doesn't guess; it understands the environment.

Whether identifying exposed OT devices, isolating rogue field equipment, analyzing SCADA communication paths, or drafting segmentation plans for grid operations, IQ accelerates every workflow without adding agents, probes, or new infrastructure. ORDR IQ gives your team the speed to outpace threats, not just react to them.

The Power You Experience with ORDR

ORDR protects connected asset across generation, transmission, and distribution.

ORDR IQ gives your team the speed to outpace threats, not just react to them.

Together, they reduce breach risk, prevent OT/IT lateral movement, strengthen operational resilience, and support regulatory and audit frameworks such as NERC CIP—without adding complexity.

Get Ahead. Stay Ahead.

Threats move fast. With ORDR IQ, your team can move faster. See what's inside your network before someone else does. One session often reveals what others miss.
