ORDR for Hospitality

Hospitality runs on experience. Every guest room, concierge desk, point-of-sale system, kitchen network, security camera, digital sign, and IoT-enabled amenity needs to work flawlessly. But every asset also expands the attack surface across hotels, resorts, casinos, convention centers, and multi-property brands. ORDR brings control to this complexity with a platform built to see every asset, understand its behavior, and secure guest and operational environments without disrupting service. And with ORDR IQ, your team gains the intelligence and speed to outpace threats in experiences where trust is everything. This is security built for hospitality, fast, seamless, and grounded in real operational truth.

INTELLIGENCE: AI Protect for Security
See Every Asset. Understand Every Exposure.

Hospitality environments rarely suffer from a lack of systems. They suffer from a lack of visibility across sprawling, interconnected, guest-facing and staff-facing devices. ORDR identifies every asset the moment it connects, including POS systems, guest-room IoT devices, digital locks, kiosks, booking systems, HVAC controls, cameras, sensors, back-office equipment, and cloud-based applications.

By understanding how every asset behaves and communicates, ORDR exposes hidden risks and stops lateral movement long before attackers can reach payment systems, guest data, or operational networks.

ACTION: AI Protect for Segmentation
Turn Intelligence Into Zero Trust Segmentation.

Hotels and resorts can't afford downtime or friction, not in front-of-house operations, not in back-of-house systems, and definitely not in guest-facing networks. ORDR delivers Zero Trust enforcement designed for distributed, multi-property environments.

With deep NAC and firewall integrations and millions of flows analyzed daily, segmentation becomes dependable, repeatable, and aligned to the way hospitality operates.

No agents. No firmware changes. No disruption to staff or guests. Just safe, scalable Zero Trust enforcement across properties, venues, data centers, and cloud environments.

ORCHESTRATION: ORDR IQ
The AI Orchestration That Makes Teams Faster.

ORDR IQ uses ORDR's deep telemetry and asset intelligence to deliver expert-level answers in seconds. It doesn't guess; it understands.

Whether isolating compromised guest-room IoT devices, identifying vulnerable POS endpoints, analyzing communication paths between properties, or generating segmentation plans for casino floors or resort operations, IQ accelerates every workflow without adding agents, probes, or infrastructure. ORDR IQ gives your team the speed to outpace threats, not just react to them.

The Power You Experience with ORDR

ORDR protects assets from rooms and venues to kitchens, casinos, event spaces, and back-office systems.

ORDR IQ gives your team the speed to outpace threats, not just react to them.

Together, they reduce breach risk, contain lateral movement, protect guest trust, support PCI and audit readiness, and strengthen operational resilience—without adding complexity.

Get Ahead. Stay Ahead.

Threats move fast. With ORDR IQ, your team can move faster. See what's inside your network before someone else does. One session often reveals what others miss.
