

ORDR for Healthcare

Healthcare moves fast. It's complex, interconnected, and packed with devices that keep care running but also widen the attack surface every single day. ORDR brings control to the environment with a platform built to identify every device, understand what it's doing, and secure your hospital without adding friction to clinical work. And with ORDR IQ, your team gains the acceleration they need to make smarter decisions, faster than the threats they face. This is security built for the reality of healthcare—simple, confident, and grounded in verified truth.

INTELLIGENCE: AI Protect for Security

See Every Device. Understand Every Risk.

Hospitals rarely lack data—they lack visibility into the devices that truly matter. ORDR discovers every connected asset instantly and understands exactly how it should behave. From infusion pumps and telemetry monitors to imaging systems, surgical robotics, HVAC controls, and lab analyzers, ORDR reveals what belongs, what doesn't, and what needs attention.

When behavior starts to drift, ORDR catches it early and shuts down the lateral-movement paths ransomware depends on. The result is fewer surprises, fewer escalations, and a far more predictable environment for care delivery.

ACTION: AI Protect for Segmentation

Turn Intelligence Into Reliable Segmentation.

Downtime isn't an option in healthcare. ORDR is built with that truth in mind. Designed for multi-hospital scale, it delivers clinically safe enforcement using the infrastructure you already trust. With millions of flows analyzed daily and deep integrations with leading NAC and firewall ecosystems, segmentation becomes something your team can actually operationalize—not a heroic one-off project.

No agents. No firmware changes. No disruption. Just safe, repeatable Zero Trust segmentation that fits the way your hospital works.

ORCHESTRATION: ORDR IQ

The AI Orchestration That Makes Teams Faster.

ORDR IQ builds on ORDR's real telemetry, risk insights, and historical understanding of your environment to deliver expert-level answers in seconds. It doesn't guess—it reasons.

Whether you're identifying exposed clinical devices, generating safe isolation policies for PACS, or preparing segmentation plans that won't interrupt Radiology, IQ gives your team a meaningful lift. No new agents, no probes, no integrations—just immediate acceleration on top of the platform already in place.
