

ORDR for Retail

Retail moves fast. Stores open daily, transactions never stop, and thousands of devices, POS terminals, kiosks, scanners, cameras, Wi-Fi systems, mobile endpoints, and back-of-house systems, keep operations running. Every one of them expands the attack surface. ORDR brings control to that complexity with a platform built to see every asset, understand its behavior, and secure operations without slowing the business. And with ORDR IQ, your team gains the speed and intelligence to stay ahead of threats in an environment where every minute counts. This is security designed for modern retail: dynamic, distributed, and grounded in real operational truth.

INTELLIGENCE: AI Protect for Security

See Every Asset. Understand Every Exposure.

Retail environments rarely lack tools. They lack visibility across all the assets that keep the business moving. ORDR identifies every connected system the moment it appears on the network: POS systems, payment terminals, handheld scanners, digital signage, inventory robots, IoT sensors, back-office systems, guest Wi-Fi devices, and supply-chain infrastructure.

By understanding what each asset is, how it behaves, and where it communicates, ORDR exposes hidden risks early and stops lateral movement before attackers reach payment data, loyalty systems, or critical operations.

ACTION: AI Protect for Segmentation

Turn Intelligence Into Zero Trust Segmentation.

In retail, downtime means lost revenue. ORDR delivers Zero Trust enforcement that fits naturally into fast-moving, multi-location environments. With deep integrations across major NAC and firewall ecosystems and millions of flows analyzed daily, segmentation becomes dependable, repeatable, and aligned to real retail workflows.

No agents. No firmware changes. No disruption to stores or transactions. Just safe, scalable Zero Trust enforcement across stores, distribution centers, corporate offices, and cloud environments.

ORCHESTRATION: ORDR IQ

The AI Orchestration That Makes Teams Faster.

ORDR IQ uses ORDR's real telemetry, device intelligence, and behavioral understanding to deliver expert-level answers in seconds. It doesn't guess; it understands.

Whether identifying vulnerable payment endpoints, isolating compromised IoT devices, prioritizing issues across store fleets, or drafting segmentation plans for distribution centers, IQ accelerates every workflow without adding agents, probes, or new infrastructure. ORDR IQ gives your team the speed to outpace threats, not just react to them.
