

ORDR for Financial Services

Financial institutions run on trust. Every ATM, teller workstation, server, and transaction system must stay secure while threats grow more sophisticated and connected devices expand the attack surface. ORDR brings order to this complexity with a platform built to identify every asset, understand its behavior, and enforce Zero Trust without slowing operations. And with ORDR IQ, teams gain the speed and intelligence to get ahead of risk before it impacts customers or compliance. This is cybersecurity built for the high-stakes world of finance—simple, confident, and grounded in verified truth.

INTELLIGENCE: AI Protect for Security

See Every Asset. Understand Every Exposure.

Financial organizations don't fail because they lack logs—they fail because they can't see the assets that matter most. ORDR discovers every connected device the moment it touches the network, from ATMs and teller PCs to transaction servers, IoT/OT systems, authentication endpoints, and more.

By understanding what each device is, how it behaves, and where it communicates, ORDR reveals hidden exposures early and shuts down lateral movement before attackers reach sensitive financial data.

ACTION: AI Protect for Segmentation

Easily Implement Least-Privilege Segmentation.

Institutions can't afford disruption. ORDR was built for large-scale, regulated environments where uptime, auditability, and precision matter. With deep NAC and firewall integrations and millions of flows analyzed daily, ORDR delivers segmentation that is both dynamic and dependable.

No agents. No downtime. No operational friction. Just safe, scalable Zero Trust enforcement aligned to financial workflows and regulatory expectations.

ORCHESTRATION: ORDR IQ

The AI Orchestration That Makes Teams Faster.

ORDR IQ builds on ORDR's real-world telemetry, risk context, and behavioral intelligence to deliver expert-level answers in seconds. It doesn't guess; it understands your environment.

Whether pinpointing vulnerable teller endpoints, isolating rogue IoT devices, or drafting segmentation plans for transaction systems, IQ accelerates every security workflow. No new agents, probes, or integrations—just immediate lift on top of your existing ORDR deployment. Threats move fast. With IQ, your team can move faster.
